SUMMARY

Junior ML Engineer and Web Developer with hands-on experience building full-stack applications and AI-powered systems. Proficient in Python, HTML5, and CSS3. Automated data-cleaning pipelines reducing manual processing time by 30%. Experienced integrating Generative AI (LangChain, Google Gemini, OpenAI API) and machine learning models into production web products. Skilled in Git, GitHub, and cloud deployment on Streamlit Cloud. Passionate about building scalable software that delivers measurable business impact.

EXPERIENCE

Full Stack Developer Intern — Growth Flow Media (Remote)

Aug 2025 - Jun 2026

- Transitioned from a frontend-focused role into a full-stack position, delivering features spanning both client-side and server-side components across live web applications.
- Built responsive frontend interfaces and integrated them with backend REST APIs, working with relational databases for data storage and retrieval.
- Debugged, tested, and optimized full-stack applications to improve reliability and performance of shipped features.
- Collaborated remotely with a cross-functional team using Git-based workflows to plan, review, and deliver projects on schedule.

TECHNICAL SKILLS

Programming Languages: Python, HTML5, CSS3, JavaScript

Web Frameworks & Tools: React, Vite, Tailwind CSS, Streamlit, REST API Development, Git, GitHub

Machine Learning & AI: TensorFlow, PyTorch, Scikit-learn, NLTK, Deep Learning, NLP, Computer Vision

Generative AI & LLMs: LangChain, OpenAI API, Google Gemini API, RAG, Prompt Engineering

Data & Visualization: Pandas, NumPy, Matplotlib, Seaborn, SVG Rendering

Tools & Platforms: Jupyter Notebook, Streamlit Cloud, Vercel

PROJECTS

TaskFlow - Task Management App | React, Vite, Tailwind CSS, shadcn/ui, Framer Motion

Mar 2026 - Apr 2026 | Live Demo: [taskflow-pink-six.vercel.app](#)

- Built a modern task management web app with create/edit/delete, instant search, and a progress-tracking dashboard using React and Vite.
- Implemented dark/light mode, local storage persistence, and responsive Framer Motion animations with a shadcn/ui and Tailwind CSS component system.

JobFit AI - Resume Analyzer | Python, LangChain, Google Gemini, Streamlit

Jan 2026 - Feb 2026

- Architected a full-stack Generative AI web application scoring resumes against job descriptions using Google Gemini 2.5 and LangChain via semantic matching and ATS keyword analysis.
- Deployed on Streamlit Cloud with secure API key management, robust error handling, and advanced prompt engineering replicating ATS scoring logic for actionable candidate feedback.

Langagraph: Graph & Agent Visualizer | HTML5, CSS3, SVG

Dec 2025 - Jan 2026

- Built an interactive browser-based graph simulation tool generating grid, ring, and star network structures with agent-flow animations using SVG rendering.
- Implemented Dijkstra's Shortest Path Algorithm for real-time optimal routing animation within weighted directed graphs.

WhatsApp Chat Analyzer | Python, Streamlit, NLTK, Pandas

Oct 2025 - Nov 2025

- Built a full-stack data analytics web app parsing WhatsApp chat exports using NLTK for sentiment analysis, tokenization, and behavioral pattern recognition.
- Developed an interactive Streamlit dashboard with activity heatmaps, word clouds, and sentiment trends to surface actionable user engagement insights.

EDUCATION

DAV COLLEGE, AMRITSAR | India

Bachelor of Computer Applications (BCA) | Oct 2022 - Jul 2025

- Second Division

CERTIFICATIONS

- Artificial Intelligence and Machine Learning | MITS Academy | Jul 2025 - Dec 2025
